

**Description:** This tip sheet outlines important changes to OnCore in the 15.4.9 version upgrade.

**Audience:** Current UF OnCore users.

## OVERVIEW OF CHANGES

In general, end-user workflows and consoles are not changing with the upgrade to OnCore version 15.4.9. However, there are some updates/enhancements that you may notice:

1. Improved search functionality to **Register Subject**

## IMPROVED SEARCH FUNCTIONALITY

New search fields make for a more robust search

The screenshot shows the 'Find Subject' and 'Subject Details' interface. The 'Find Subject' section on the left has a red box around the 'First Name' and 'Gender' input fields. The 'Subject Details' section on the right shows various fields for subject information, including 'Race\*' with a list of options like 'White', 'Black or African American', etc. Buttons for 'Find', 'Clear', and 'Create New' are visible at the bottom of the search section.

You can now search using **Gender** and/or **First Name**, including using partial information for **First Name**.

Example:

The screenshot shows the 'Find Subject' and 'Subject Details' interface. The 'Find Subject' section has 'Study Site' set to 'UF Gainesville', 'Last Name' to 'Doe', and 'First Name' to 'Jo'. The 'Subject Details' section shows the same information. Below the search section, a 'Results' table is displayed with one row of data:

Subject MRN	Addl Subj IDs	Last Name	First Name	Middle Name	Suffix	Gender	Birth Date
		DOE	JOHN			M	

## OTHER 15.4.9 FEATURES

Other administrative enhancements/features are outlined in the **OnCore 15.4.9 Feature Highlights** found under the **Release Highlights** section of the OnCore Learning Portal, which is accessible through the **Help Menu** in OnCore.
